

GENDER DIFFERENCES IN VOTER TURNOUT *

In recent elections, voter turnout rates for women have equaled or exceeded voter turnout rates for men. Women, who constitute more than half the population, have cast almost ten million more votes than men in recent elections.

VOTER TURNOUT IN PRESIDENTIAL ELECTIONS

In every presidential election since 1980, the proportion of eligible female adults who voted has exceeded the proportion of eligible male adults who voted (see Figure 1). In all presidential elections prior to 1980, the voter turnout rate for women was lower than the rate for men. The number of female voters has exceeded the number of male voters in every presidential election since 1964 (see Figure 2).

Figure 1. Proportion of Eligible Adult Population Who Reported Voting

Figure 2. Number Who Reported Voting

* Data are from the U.S. Bureau of the Census *Current Population Reports*, Series P-20, "Voting and Registration in the Election of November 1964" and subsequent reports for all years through 2018. These figures are from post-election responses to supplementary questions in the monthly Current Population Survey for a sample of households in November of each election year. Respondents to the survey report their own voting activity and that of other members of their household. The sample systematically over-reports both voting and registration by several million people. In years prior to 1996, the questions used to determine citizenship measures were asked in different ways, and the U.S. Bureau of the Census advises some caution in direct comparison across these years.

The U.S. Census Bureau has revised race and ethnicity categorizations over time, making direct comparisons by category difficult from year to year. The categories listed here have been chosen to try to best encompass the same populations from year to year. Since 2004, the U.S. Census Bureau reported each racial category "alone" or "in combination." The numbers reported here reflect only the "alone" categories. Comparable categories were reported in 2000, with reports for "White Non-Hispanic," "Black," "Asian," and "Hispanic" reported without "in combination" options. In years prior to 2000, the U.S. Census Bureau listed only three racial categories: "Black," "Hispanic" and "White." Their figures double-counted some Hispanic individuals who were also included as Black or White; thus, for years prior to 2000, the total "number who reported voting" figure in the first table on this fact sheet is lower than the total reached by adding the separate "number who reported voting" figures for Black, Hispanic and White voters in the second table. For more information about these categories, see www.census.gov/population/race/.

GENDER DIFFERENCES IN VOTER TURNOUT (CONTINUED)

Among younger citizens (18-64), a higher proportion of women than men voted in 2016, 2012, 2008, 2004, 2000 and 1996; the pattern is reversed among older voters (65 and up).

Among Asians/Pacific Islanders, Blacks, Hispanics, and Whites, the number of female voters in recent elections has exceeded the number of male voters. While the difference in voter turnout rates between the sexes is greatest for Blacks, women have voted at higher rates than men among Blacks, Hispanics, and Whites in the last eight presidential elections; in 2000, the first year for which data are available, Asian/Pacific Islander men voted at a slightly higher rate than Asian/Pacific Islander women. Since 2004, Asian/Pacific Islander women have voted at rates equal to or higher than rates for Asian/Pacific Islander men.

	% Eligible Voting Population		Number Who Reported Voting
